

Module	Workflow	Steps	Comments	Test Status	
1. Procurement	1.1 - Supplier Advance workflow	PA Create draft PO, get approval for the draft PO from PM (manual confirmation only), share the draft PO with Supplier - Supplier share the PFI for the draft PO PA Complete the PO with Payment terms/Delivery times and enter PFI details, and send for system approval (to PM). PM approves. PA Share the approved PO with Supplier To do the advance payment, Go to Finance > Expenses > Supplier Advance , Select Supplier, select PO, Enter the advance amount in base currency - LYD (Ex. 50% of total PFI value) Dr - Advance to Supplier. Cr - Cash. Save and Complete, check the JE to confirm the auto entry Go to Inventory > Supplier Fulfillment > GRN . Do the GRNs (there can be several shipping invoices related to the PO/PFI), check the JE to confirm the auto entries After all GRNs complete, time to do the balance payment Go to Finance > Vendor Invoices , Select Supplier, Select PO, from LINKED GRNs, select all the GRNs line by line (use + New Row' button), Save and Complete. check the JE to confirm the two auto entries, 'Vendor invoice' and 'Apply supplier advance' Go to Expenses > Invoice settlement > select supplier , from INVOICE SETTLEMENT select invoice (VI number) - notice only the balance amount will be displayed Dr - Accounts Payable. Cr - Cash. Save and complete. check the General Ledger, Accounts Payable balance should be zero	Please explain why the payments we make are considered as "credit" and payments we receive as "Debit" - Gayan: refer the explanation given in 'Explanations' tab	Pass	
	1.2 - Balance Payment workflow	Go to Inventory > Supplier Fulfillment > Create GRN (actual arrival qty 20, system GRN qty 200). So need to do a Stock Adjustment (SA) Go to Inventory > Stock Reconciliation . Select Storage Location. Toggle ON for 'Is this for GRN -' Search for the SKU/SKUs that needs amendment, select GRN number from dropdown, reduce STOCK IN HAND to 20 (Adjustment changes to a minus value) Save and Complete. Check the inventory to confirm the correction. Check the GL Note: We recommend to use a single Reconciliation Report for a single GRN correction Go to Inventory > Supplier Fulfillment > Create GRN (actual arrival qty 800, system GRN qty 80). So need to GRN the remaining qty again Go to Inventory > Supplier Fulfillment > Create GRN (qty 720) Save and Complete. Check the inventory to confirm the correction. Check the GL Scenario: GRN entered for more. VI created. Trying to reduce the Qty from GRN Reconciliation > Block the SA Create GRN for more than actually arrived [actual arrival qty 20, system GRN qty 200] Create vendor invoice VI for the GRN Create Stock Adjustment (SA) using GRN Reconciliation Report (toggle ON) to correct the mistake from 200 to 20, user is blocked from creating SA since GRN is linked with VI Inform VI creator to Revoke the VI. Check the JE reversal after the VI revoke Go again to the Pending SA, Save and Complete (now you are not blocked) - check inventory for stocks correction Create a new vendor invoice VI for the same Supplier by selecting the PO. Now the correct amount will be shown in dropdown (BILLABLE will show correct amount, ORIGINAL will show initial amount). Save and Complete Go to Expenses > New Vouchers > Invoice Settlement , create a Payment Voucher PV for new VI. Select VI from dropdown (now the correct amount will show). Dr AR and Cr Cash. Save and Complete. Check the GL Sales Admin creates an RR from Main WH to Storefront. Go to Inventory > Restock Requests > Add RR . Distribution Center = Location where goods are requested from. To Location = where goods are sent to Select the items and qty. Select Fulfillment Type. Complete the RR Now, WH admin will see the RR in Order Fulfillment as pending. WH admin complete the OF for RR. The main WH stocks gets reduced and concurrently, the Storefront stocks gets increased Note: It is imperative that the goods be delivered to the intended destination, as the stock levels have already been increased despite the physical goods not yet being received Sales Admin creates an RR from Main WH to Van. Go to Inventory > Restock Requests > Add RR WH admin fulfill the RR by Cr Of module. Main WH will then load the goods to Van based on the OF (GTM) created Van goes on selling the goods Van returns to Main WH on days end to handover the remaining goods back to Main WH WH Admin creates the RR. Distribution Center = Van. To Location = Main WH. Sales Admin completes the OF realted to RR created by WH Admin Note: The maker of the RR should not be able to complete the corresponding Order Fulfillment. Check if WH Admin Can complete the RR OF (must not be able to do this)	There should be notification to the finance that the goods are received and payment is pending	Pass	
	1.3 - Post payment workflow	Go to Inventory > Supplier Fulfillment > Create GRN (actual arrival qty 20, system GRN qty 200). So need to do a Stock Adjustment (SA) Go to Inventory > Stock Reconciliation . Select Storage Location. Toggle ON for 'Is this for GRN -' Search for the SKU/SKUs that needs amendment, select GRN number from dropdown, reduce STOCK IN HAND to 20 (Adjustment changes to a minus value) Save and Complete. Check the inventory to confirm the correction. Check the GL Note: We recommend to use a single Reconciliation Report for a single GRN correction Go to Inventory > Supplier Fulfillment > Create GRN (actual arrival qty 800, system GRN qty 80). So need to GRN the remaining qty again Go to Inventory > Supplier Fulfillment > Create GRN (qty 720) Save and Complete. Check the inventory to confirm the correction. Check the GL Scenario: GRN entered for more. VI created. Trying to reduce the Qty from GRN Reconciliation > Block the SA Create GRN for more than actually arrived [actual arrival qty 20, system GRN qty 200] Create vendor invoice VI for the GRN Create Stock Adjustment (SA) using GRN Reconciliation Report (toggle ON) to correct the mistake from 200 to 20, user is blocked from creating SA since GRN is linked with VI Inform VI creator to Revoke the VI. Check the JE reversal after the VI revoke Go again to the Pending SA, Save and Complete (now you are not blocked) - check inventory for stocks correction Create a new vendor invoice VI for the same Supplier by selecting the PO. Now the correct amount will be shown in dropdown (BILLABLE will show correct amount, ORIGINAL will show initial amount). Save and Complete Go to Expenses > New Vouchers > Invoice Settlement , create a Payment Voucher PV for new VI. Select VI from dropdown (now the correct amount will show). Dr AR and Cr Cash. Save and Complete. Check the GL Sales Admin creates an RR from Main WH to Storefront. Go to Inventory > Restock Requests > Add RR . Distribution Center = Location where goods are requested from. To Location = where goods are sent to Select the items and qty. Select Fulfillment Type. Complete the RR Now, WH admin will see the RR in Order Fulfillment as pending. So need to GRN the remaining qty again Go to Inventory > Supplier Fulfillment > Create GRN (qty 720) Save and Complete. Check the inventory to confirm the correction. Check the GL Scenario: GRN entered for more. VI created. Trying to reduce the Qty from GRN Reconciliation > Block the SA Create GRN for more than actually arrived [actual arrival qty 20, system GRN qty 200] Create vendor invoice VI for the GRN Create Stock Adjustment (SA) using GRN Reconciliation Report (toggle ON) to correct the mistake from 200 to 20, user is blocked from creating SA since GRN is linked with VI Inform VI creator to Revoke the VI. Check the JE reversal after the VI revoke Go again to the Pending SA, Save and Complete (now you are not blocked) - check inventory for stocks correction Create a new vendor invoice VI for the same Supplier by selecting the PO. Now the correct amount will be shown in dropdown (BILLABLE will show correct amount, ORIGINAL will show initial amount). Save and Complete Go to Expenses > New Vouchers > Invoice Settlement , create a Payment Voucher PV for new VI. Select VI from dropdown (now the correct amount will show). Dr AR and Cr Cash. Save and Complete. Check the GL Sales Admin creates an RR from Main WH to Storefront. Go to Inventory > Restock Requests > Add RR . Distribution Center = Location where goods are requested from. To Location = where goods are sent to Select the items and qty. Select Fulfillment Type. Complete the RR Now, WH admin will see the RR in Order Fulfillment as pending. WH admin complete the OF for RR. The main WH stocks gets reduced and concurrently, the Storefront stocks gets increased Note: It is imperative that the goods be delivered to the intended destination, as the stock levels have already been increased despite the physical goods not yet being received Sales Admin creates an RR from Main WH to Van. Go to Inventory > Restock Requests > Add RR WH admin fulfill the RR by Cr Of module. Main WH will then load the goods to Van based on the OF (GTM) created Van goes on selling the goods Van returns to Main WH on days end to handover the remaining goods back to Main WH WH Admin creates the RR. Distribution Center = Van. To Location = Main WH. Sales Admin completes the OF realted to RR created by WH Admin Note: The maker of the RR should not be able to complete the corresponding Order Fulfillment. Check if WH Admin Can complete the RR OF (must not be able to do this)	We understand the concern and agree that giving users access to multiple Storage Locations could create a risk of unauthorized inventory manipulation. Our requirement was not to give users full access to multiple Storage Locations. The requirement is that users should be able to view the available stock at relevant locations when raising transactions such as Restock Requests, Sales Orders/invoices, etc. Currently, the system appears to require Storage Location access in order for a location to appear in the transaction dropdowns. This means we have to give the user access to locations that they should not actually have permission to manage, which then creates the risk you highlighted (e.g., GRN or Stock Reconciliation). If there is a better way to achieve this, we are open to the proposed solution. For example, a Van Salesperson may need to see available stock at the relevant warehouse/storefront when raising a Restock Request, but this should not give them permission to GRN, perform Stock Reconciliation, or make Stock Adjustments for that location. Gayan: We deployed a solution to this problem. Pls check and confirm workflow 4.11	Pass	
2.10 Stock Reconciliation - Mistakes done when correcting overstated GRN made to a Main Warehouse	2.10 Stock Reconciliation - Mistakes done when correcting overstated GRN made to a Main Warehouse	Actual shipment arrival Qty is 20. WA mistakenly enter the qty as 200. Complete the GRN. Note: We strongly advise to assign another WA to double check the GRN in draft stage before Complete it. Also WA should inform all stakeholders (WHM, PM etc.) about the mistake To correct the mistake, WA go to Inventory > Stock Reconciliation > Stock Reconciliation . Select Date of the Reconciliation. Select Warehouse (If Warehouse is a Main Storage Location/ Warehouse, then the 'Is this for GRN Stock Recon -' will appear). Toggle ON (Green) if it's a GRN done for a Main WH In draft, from 'Material / Pallet Adjustment' table, search for the SKU. Select the Pallet Number, Select the GRN Number. From GOOD - STOCK IN HAND, reduce the overstated qty (the qty shown here in STOCK IN HAND is the current total qty in inventory) (Part A) WA incorrectly reduces the qty in draft Stock Reconciliation (SA). For example, instead of reducing 180, WA mistakenly reduce 20 from STOCK IN HAND and Complete the SA To correct the second mistake, WA has to keep the first SA and create another SA for the correct remaining qty reduction Complete the second SA draft. Check JE for the auto entry. Check inventory for the corrected qty. (Part B) WA tries to increase the qty in draft Stock Reconciliation (SA). For example, instead of reducing 180, WA mistakenly tries to increase the STOCK IN HAND qty. User is blocked from the system by doing this action. Actual shipment arrival Qty is 20. WA mistakenly enter the qty as 200. Complete the GRN. Mistake is not identified readily and neglected. Vendor invoice not created by PM/PA SA create an RR (Restock Request) - (Ex. requesting for a qty of 170, for this item), and Complete it At Order Fulfillment (OF), before completing the OF (OF Pending), WA realises the actual inventory qty for the item is 20 and not 170 WA informs SA to Revoke the RR. SA revokes the RR. Once revoked, the inventory allocation releases back to stock qty WA open a new SA in Reconciliation for GRN and correct the mistake. Check the inventory. Check the JE and GL WA inform SA to create a new RR. Issue the goods (OF Dispatch) Open Inventory > Stock Reconciliation and start a regular recon (not a GRN recon) at the warehouse that shows Damaged Qty. Find the SKU. Step 2 - Lower Damaged Stock In Hand (10 -> 0). The screen will raise Goods Stock In Hand by the same amount (1,000 -> 1,010) and show that it restored units to usable stock Complete the recon. Inventory Report should show Stock QTY 1,010 and Damaged QTY 0 Open Inventory > Restock Requests > Add . Leave Request from as Good stock Pick source warehouse, destination, add the SKU, request 10, complete the RR A warehouse user completes the Order Fulfillment. The 10 units arrive at the destination as normal Stock QTY Note: To write off instead of restore: after step 2 , reduce Goods In Hand again before completing the recon. Don't do that if you intend to restock Leave the damage qty (e.g. 10 units) as Damaged QTY on the Inventory Report. Do not recon them back to good WA Open Inventory > Restock Requests > Add Set Request from to Damaged stock (locked after you initiate) Pick source warehouse (where the damage sits) and destination. Note: Can create a destination location for each Main Warehouse called 'Quarantine'. Goods initially identified as Damaged can be moved here, verify if they are actually damaged etc. and use Path 1 to move them back to sellable stock Search products. only SKUs with Damaged QTY appear. The qty column is Damaged QTY Request up to the available damaged amount (10), complete the RR A different user (Suggest WM, not another WA) completes the Order Fulfillment (OF) Now check the inventory report of Source: Stock QTY unchanged, Damaged QTY 0. At Destination (Tripoli Main WH Quarantine): Stock QTY unchanged (not sellable), Damaged QTY 10 Note: The OF screen shows Request from: Damaged stock (stays damaged) so the compiler knows this is not a normal restock Go to Sales > Sales Invoices . Create SI for LYD100, complete it (no payment). Check JE (one entry: Dr AR, Cr Sales, inventory/COGS) Now customer returns LYD50 worth of goods. Go to Inventory > Return Management . Create SRN linked to that SI, return LYD50 worth, complete SRN. Check JE (one entry: Dr Sales Returns, Cr AR, inventory/COGS). Now customer may ask for a refund worth LYD50 Go to Finance > Refund Vouchers . Try Refund Voucher for \$50 from that SRN (Dr AR, Cr Cash). Expected: Refund blocked (no cash to pay out so CREDIT SOURCE will show nothing). Apply Credits: nothing to apply (already auto-applied) Go to Finance > Customer Outstanding and check Customer Outstanding: Credit Applied \$0, Balance Due \$0 Note: WH admin need to use Stock Reconciliation module to move the return goods to a 'Returns' storage location SI LYD100, complete. Customer only pays partially, LYD10 To register the payment, go to Finance > Income Select Customer, Select Invoice from INVOICE SETTLEMENT, Dr Cash Cr AR, Save and Complete. Income Payment Receipt LYD10 allocated to SI Customer returns 50 with of goods. SRN LYD50 return, complete Try Refund Voucher LYD50 - Expected: Refund LYD50: blocked Open Apply Credits — see if SRN appears: Expected: no open SRN credit Go to Finance > Customer Outstanding . Balance Due 40 Correct outcome: customer keeps LYD50 of goods, paid LYD10, owes LYD40 — no cash refund allowed	If the WA wants to go with Option A, there is not option to revoke a completed Stock Recon. So how to do this? Gayan: Option A has been added mistakenly. Revolving a 'Completed' Stock Adjustment by Reconciliation is a serious matter and has many negative cascading impacts. Revoke option will not be possible. If user make mistakes in the recon, they should open another SA to correct it (i.e. only option B is possible). Red lines will be removed from this WD. Akhila: Yes we also suggest this.	Pass	
	2.11 Stock Reconciliation - Overstate mistake to a Main Warehouse GRN, mistake not identified or neglected/forgotton	Actual shipment arrival Qty is 20. WA mistakenly enter the qty as 200. Complete the GRN. Mistake is not identified readily and neglected. Vendor invoice not created by PM/PA SA create an RR (Restock Request) - (Ex. requesting for a qty of 170, for this item), and Complete it At Order Fulfillment (OF), before completing the OF (OF Pending), WA realises the actual inventory qty for the item is 20
